## Technical Skills

---

- |              |           |
|--------------|-----------|
| ● JavaScript | ● Express |
| ● HTML/CSS   | ● SQL     |
| ● Angular    | ● MongoDB |
| ● Node       | ● Ionic   |

## Work History

---

### DevMountain - Mentor (August 2016 – Present)

- Mentoring students as they learn JavaScript, Html, CSS, Angular, Node, PostgreSQL, and other technologies
- Preparing and leading workshops in JavaScript, HTML/CSS, and more

### KarSync - Web Developer Intern(August 2016 – October 2016)

- Contribute to KarSync's code base using Mongo, Express, Angular, and Node
- Mentor less experienced interns

## Project Experience

---

### KarSync

URL: [karsync.ninja](http://karsync.ninja)

A project where I got to work with a group for a local start up. They want to put on board diagnostic readers in cars, and create applications around those. We were asked to make the web portal for a mechanic to see all the data coming from his clients. They were already were using MySQL, so I had the oppurtunity to learn it. I was responsible for the Dashboard, Maintenance view, and the backend.

### Space Trader

URL: [spacetrader.ninja](http://spacetrader.ninja)

My first attempt at remaking Space Trader. Space Trader was a text based rpg for the palm pilot. It's official site is [www.spronck.net/spacetrader](http://www.spronck.net/spacetrader). My first full stack app. I wanted to recreate the feel of playing it on my palm pilot. So I used [Ionic](#). Ionic is a framework that lets you turn your web apps into mobile apps.

## Education

---

DevMountain Web Development Boot Camp (2016)

AA, Utah Valley University (2008)
